

Plumbing By Tim Advice Sheet No 1

At Plumbing By Tim we want to give our customers the best service and advice possible, To make it easier for us we are producing advice sheets for the homeowner to eliminate the costs involved of having a plumber attend your house to fix the plumbing problems you may have.

Drainage Inspection Shafts.

The name says it all! Located on most drainage system there will be some form of an inspection point where your household drain connects to the main sewer drain. These inspection shafts play a vital role in your drainage system. Most people don't like the look of them in their back yard and they end up being buried, by mulch, top soil or even buildings/ decks.

The photo on the left is what the Inspection Shaft will look like.

The photo on the left shows the access to the drainage system. This access is required if you have a blockage at the point or further along the drain. In some cases it makes it difficult for the plumber to unblock the drain if we are unable to find the Inspection Shaft.

Recommendations

- Place a large pot plant over the concrete cover.
- Take a photo of the cover before you fill over it. Measure off side fence or a permanent feature in your property. This will save time and money when unclearing the blockage.
- The location can be found through Yarra Valley water however, this all takes time.
