

Plumbing By Tim Advice Sheet No 2

At Plumbing By Tim we want to give our customers the best service and advice possible. To make it easier for us we are producing advice sheets for the homeowner to eliminate the costs involved of having a plumber attend your house to fix the plumbing problems you may have.

Flick Mixers, Shower, Bath, Basin Sink

This advice sheet covers the installation requirements for Flick Mixers. This type of tap ware has become very popular over the last 5 years. These are some important points that customers need to be aware of before you look at purchasing these types of taps.

- The taps are only rated to a certain water pressure KPA, if you have a higher water pressure than the tap is rated to, you can damage the tap or more importantly your house!
- Isolation valves are required when the tap is used in a vanity unit or a kitchen/ laundry sink.
- All new buildings & extensions require a 500KPA Pressure limiting valve be installed.
- All this important information is found in the installation instructions for the tap.
- Purchasing these types of taps from large hardware stores can cause difficulties in getting replacement parts. If the taps do fail, you may have to completely remove the tap to take it back to the place of purchase.

Recommendations

- Test your water pressure via a water pressure gauge to determine if you require a pressure gauge.
- Purchase a tap from a plumbing supply store so you receive a warranty. Also plumbing supply stores have service technicians who are able to fix the taps.
