

Plumbing By Tim Advice Sheet No 3

At Plumbing By Tim we want to give our customers the best service and advice possible, To make it easier for us we are producing advice sheets for the homeowner to eliminate the costs involved of having a plumber attend your house to fix the plumbing problems you may have.

Flexible connections (easy connectors)

This advice sheet covers the installation of flexible connections. Care should be taken when installing these hoses.

- The hoses should not be pulled tight, there should be some flexibility in the hose, and the hose needs to have a nice curve **NOT** sharp bends.
- Older hoses should be checked for their condition. If you see any black marks/circles or the braiding coming away from the hose, I would recommend replacing the hoses.
- The hoses must be installed in an accessible location (unlike the 1st photo).
- This could happen to you, cause was a burst flexible connector (2nd photo).

Recommendations

- Check inside your cupboard regularly for leaks and condition of the pipework.
- If you have any doubts, call us to do a plumbing report on your house.
